PROJECT REVIEW – 2 (MODEL LAB)

Date: 20-04-2026

SMART CAMPUS EVENT MANAGEMENT SYSTEM

SDG: SDG 4 – Quality Education

Presented By:

B. Avinash– VTU25473 – Reg.No. 23UECS0079

Courses Handling Faculty:

Dr-Hafizur Rahman

Assistant Professor

INTRODUCTION

1

- In many colleges and organizations, event management is still handled manually through calls, messages, and spreadsheets.
- This often leads to missed updates, confusion in scheduling, and poor participant management.
- To solve these issues, we developed a **Smart Campus Event Management System**, which provides a centralized platform for managing events efficiently.
- The system allows admin to create and edit events.
- Students can browse a live feed of events and register with just one click.
- Overall, it is a modern platform designed to improve event planning, coordination, and communication.

PROBLEM STATEMENT

1

2

3

4

5

6

7

8

9

- The existing system has several challenges that affect efficiency and accuracy.
- Students lack a centralized digital dashboard to track their personal registration history and schedules.
- Manual registration increases workload and leads to frequent data entry mistakes.
- Also, communication about schedule changes is slow and sometimes does not reach all participants.
- There is no proper system to analyze event participation or generate quick reports.
- Manual data management prevents the institution from generating fast and accurate attendance reports.
- Existing methods lack the automation required to ensure a reliable and streamlined event management experience.

OBJECTIVES

1

2

3

4

5

6

7

8

9

- The main objective of this project is to design a **centralized and automated system** for event management.
- We aim to simplify event creation and registration processes while reducing manual work.
- **To implement** a real-time analytics dashboard for monitoring student participation and improving overall administrative data accuracy.
- Another important goal is to provide real-time updates and analytical insights to improve decision-making.

PROPOSED SYSTEM

1

- The proposed system is a **web-based application** that connects administrators and students on a single platform.

2

- Admins can easily create, update, and manage events, while students can view and register for events instantly.

3

4

- By automating the registration process, it eliminates the need for manual paperwork and reduces human errors in participant tracking.
- The system also ensures faster communication through automated notifications and maintains all records securely.
- The platform offers superior accessibility, allowing users to register for and manage events 24/7 from any device.
- Centralized data storage ensures higher security and integrity of student records compared to manual spreadsheets.
- Automated confirmation and notification systems significantly enhance the speed and reliability of campus-wide communication.

- **Input:** User data such as event details, participant invitations, responses, and event updates are entered into the system.
- **Processing:** The system processes the input by handling event creation, updating records, sending notifications, and synchronizing data in real time.
- **Database:** All information related to users, events, participants, and status is stored securely in the database for quick access and management.
- **Output:** The system displays updated event information, participant status, instant notifications, and synchronized results to all users.

WORKFLOW

TECHNOLOGIES USED

1

- **Frontend:** HTML5, CSS3, JavaScript

2

- **Backend:** Java, Spring Boot

3

- **Database:** MySQL

4

- **Tools:** Visual Studio Code, Git, GitHub, Postman, Maven

5

- **Hardware/Software Requirements:** Computer with minimum 4 GB RAM, dual-core processor, Node.js environment, modern web browser, and operating system such as Windows, Linux, or macOS

MODULE DESCRIPTION

1

Module 1: User Authentication and Management

Handles student registration, login, secure authentication, and basic profile-related information for accessing the system.

3

4

Module 2: Event Management

Admins can create new events, specifying date, time, venue, and descriptions..

5

6

Module 3: Administrative Control Hub

Provides administrators with tools to create, edit, or delete events and manage the comprehensive list of participant registrations.

7

8

Module 4: Analytics & Visual Reporting

Utilizes Chart.js to generate real-time visual insights into event popularity, registration trends, and student participation metrics.

ADVANTAGES & LIMITATIONS

1

Advantages:

2

3

- **Centralization:** All campus activities in one unified digital platform.
- **Automation:** Eliminates manual paperwork and administrative errors.
- **Data Insights:** Real-time visual tracking of student engagement.
- **Accessibility:** 24/7 mobile-friendly registration for all students.

4

5

6

Limitations:

7

8

9

- **Connectivity:** Requires a stable internet connection to function.
- **User Adoption:** Effectiveness depends on institutional-wide usage.
- **Maintenance:** Needs regular updates for data security and privacy.
- **Initial Input:** Requires time-consuming initial setup for event data.

Thank you
